1.5.11 Final Assignment (pt. 2)

Covered topics: *Google Looker Studio*

COViD-19 Dashboard

You have recently been hired from WHO as a junior data analyst. As per your starting project on the new job, your boss asked you to prepare an analysis on the pandemic caused by SARS-CoV-2 over countries. The goal is to create a dashboard that can help the team to monitor **how the fight against the disease is proceeding across countries**. Here are some possible suggestions that can help you in the analysis:

1. Some periods of time were harsher than others, maybe some seasonality for the disease exists (or even other causes).
2. Some countries are performing better than others, do some possible reasons come to your mind?
3. Are there differences in paces between infections and deaths?
4. Are we winning against COViD-19?

These are just a few of the possible points of views that can help you through the build of the dashboard.

With the goal of the analysis in mind, use Google Looker Studio to create one or more dashboards to help you build a narrative and tell a story.

Feel free to also use external dataset (Google Sheets, csv…) to enrich the depth of your analysis (e.g. you can find data to provide extra insight across *every country* or focus on *one country* in particular - remember to specify where the data come from).
